

# Examples of the 9 Drivers of Hunger

A sudden breakdown in **trade** could create a shock to the system, impacting import dependent nations, and lead to outbreaks of hunger.

The effects of **climate change** are expected to become more pronounced on the global food system by 2030.

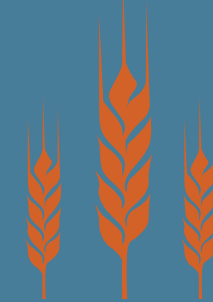

**Energy policy:** the rise of biofuels could drive resources away from food production, resulting in increased food prices.

**Financial Crises** can cause food price hikes that make food inaccessible and cause peaks in hunger

**Commodity prices:** such as oil have impacts on the transportation and thus the price of food

Innovative **food policies** to buy food from struggling farmers and provide it to schools and hospitals

**Violence** that prevents aid delivery is what turns crises into famines.

**Women's empowerment:** has the potential to reduce world hunger by up to 17%

**Purchasing Power** is determined income and consumer prices. It is affected by inflation, income growth, and employment rates. It is directly related to poverty and therefore hunger.
